

DASA® 26/13

EC FERTILIZER

Composition, properties, appearance:

DASA® 26/13 is a granulated nitrogen fertilizer with sulphur content. Nitrogen is in ammonium and nitrate form and sulphur is in water-soluble sulphate form. The granulate has a pink to brown colour and surface is treated by coating agent.

Technical specification:

total nitrogen content (N)	26 %
ammonium nitrogen content	18.5 %
nitrate nitrogen content	7.5 %
sulphur (S) soluble in water content	13 %

Grain-size distribution:

content of particles from 2 to 5 mm	min. 90 %
content of particles under 1 mm	max. 1 %
content of particles over 10 mm	0 %

Application:

The fertilizer is used in spring for basic fertilization or for additional regenerative fertilization in vegetation time to enrich the plant nutrition with nitrogen and sulphur. It is especially suitable for fertilization of oil-plants, fodder-plants, root-crops, bulb-root plants and cereals.

Benchmark dosing in kg per ha:

COMMODITY	FERTILIZER DOSE for 1 year
rape, sunflower	250 – 300
potatoes, sugar-beet	200 – 250
cereals	200 – 250
cabbage-plants	170 – 200
bulbous and bean-plants	150 – 200

The recommended doses are informative; it is necessary to respect the soil nutrient supplies, expected yield and possibilities to combine the fertilizer with other fertilizer types.

Package:

DASA® 26/13 is packed into polyethylene bags containing 50 kg of the fertilizer or delivered in bulk, eventually in big bags containing 1 000 kg of fertilizer. Polyethylene bags with a weight according to customer requirements are used for small-lot consumption packages.

Storage:

The fertilizer must be stored in original undamaged and closed containers in storerooms according to STN 46 57 50 separately from food-stuffs, drinks, feed-stuffs, pesticides and their containers. Small-lot consumption containers must be stored separately from pharmaceuticals and disinfectants.
